Acme Solar Co. Business Plan

Executive Summary

Acme Solar Co. designs and installs rooftop solar systems for small businesses in Southern California. Our mission is simple: cut energy bills by forty percent within the first year. We are seeking $1.2 million in seed funding to expand our installation crews and launch a financing program.

Over the past eighteen months, we completed 64 installations with an average payback period of 4.1 years. Customer satisfaction is high, and referrals now account for more than half of new business.

Market Opportunity

Commercial rooftops remain one of the most underused assets in the region. Fewer than one in ten eligible buildings have solar today. Rising utility rates and new state incentives make the economics compelling for owners who previously hesitated.

Our target customers are owner-operated businesses with 5,000 to 50,000 square feet of roof space. These customers value reliability, transparent pricing, and a single point of contact from design through permitting.

Financial Plan

We project revenue of $3.4 million in year one, growing to $9.8 million by year three. Gross margins should stabilize near 32 percent as we standardize equipment purchasing.

Use of funds: 45 percent for hiring and training crews, 30 percent for the financing reserve, 15 percent for marketing, and 10 percent for working capital. We expect to reach profitability in month twenty-two.

Team

Our founders bring two decades of combined experience in electrical contracting and commercial real estate. Our advisory board includes a former utility executive and a renewable energy financier.
